EZdrummer 2 Full oracle subversion tutorial and welcome to my new website. im a total n00b and i made this in my spare time to learn how to use php and mysql. one of my buddies gave me this question that i answered and he was really impressed.Q: L^p norm inequality in this Folland's Real Analysis textbook The following proof doesn't seem right to me. If $\|x\|$ is L^1 , can't we find a and b such that $\|a+bx\| \leq \|a\| + \|b\| \|x\|$ for all x ? Thank you. A: No, not necessarily. Indeed, let $a=0$ and $b=1$. Then $\|a+bx\|=\|x\|$ for all x (it is enough to choose x of norm 1), whereas $\|a\|+\|b\|\|x\|$ can be arbitrarily small. The effect of temperature on plasma levels of vasopressin, corticosterone, and ACTH in the free-ranging yellow-bellied marmot (*Marmota flaviventris*). The effect of thermal stress on corticosterone, vasopressin, and ACTH levels was studied in yellow-bellied marmots living in a semiarid environment in the eastern Sierra Nevada mountains of California, USA. Plasma corticosterone was significantly higher in the autumn than in the spring or summer, and there were no seasonal differences in plasma vasopressin or ACTH levels. Temperature had a significant effect on vasopressin levels in marmots regardless of the season, and cortisol levels in all seasons, with a peak in spring. Plasma corticosterone concentrations were significantly higher in summer than in autumn or winter, and vasopressin levels were significantly higher in summer and autumn than in winter or spring. There was a significant relationship between body temperature and ACTH, but this was only true for summer and autumn, suggesting a rise in ACTH only after a rise in body temperature, and not vice versa.
